No. 262 Fly Rod Holder with Rail Mount

Assembly and Mounting Instructions

Use the diagram at right to identify the placement of parts.

1. Remove the long, 2" fastenings and the lower adapter block from the mounting bracket.
2. Place the bracket over your 1 1/4" rail with the Scotty logo facing inboard.
3. Fit the lower adapter block into the underside of the bracket and insert the long, 2" fastenings.
4. Correctly position the bracket on your rail and tighten the long, 2" fastenings until snug.
5. Tighten the socket set screws using a 1/8" allen wrench on the underside of the adapter block. This will prevent the mounting bracket from twisting when in use.
6. The rod holder body is designed to enter the mounting bracket only when facing inboard and is locked in every other direction.
7. The rod holder is factory assembled for right-handed fishing reels. For left-handed reels, unscrew and remove the adjustor knob and turn the body end for end.
8. The flexible strap is used to secure the rod when travelling in the boat with the rod holder in the vertical position.

WARNING! This bracket will leave marks on the underside of your railing.
